

MOULDING ALGINATE

POWDER AND GEL FORMS

Cimaprem. Moulding
● ● ● ● ● ●

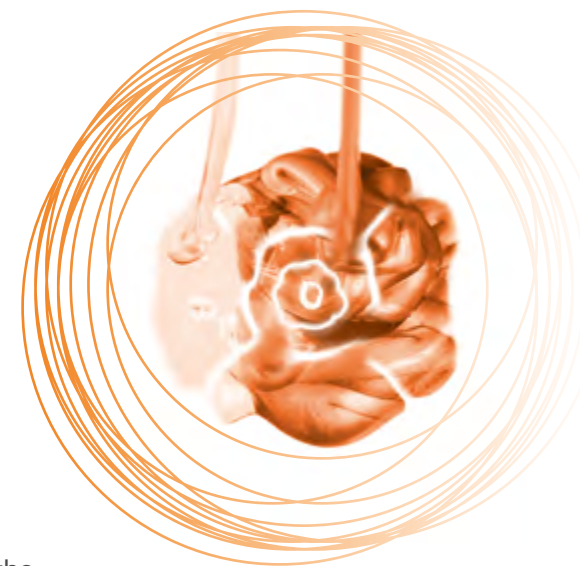

Description

The MOULDING ALGINATES of the CIMALGIN range are dedicated to specific applications in Fine Arts, hobbies & edutainment and catering industries. They are complex mixes, based with natural extracts of brown seaweeds (sodium alginate). Thanks to their specifications, the alginates formulated by Cimaprem Moulding meet the expectations of all the professionals and are developed with the advice of expert users.

Cimalgin Range

Cimaprem Moulding formulates a tailor-made moulding alginate by adjusting the precision, the texture, the setting time, the dilution, the thixotropy, permitting a variety of protocols and realizations, from the most classic to the most innovative ones.

	Caracteristics	Food contact	Reversibility	Optimised for object moulding	Optimised for body moulding	To be used with room temperature water	To be used with hot water	To be used with the skaker	Professional use	Educational use (suitable for children)	Powder	Gel
Cimalgin UF	Baby quick setting time	•			•	•				•	•
